

Product Roadmap (CTO-Level)

1. Vision

Create an AI-powered platform that automates API vulnerability discovery...

2. Strategic Pillars

1. Shift-Left Security Enablement
2. AI-Driven Remediation
3. Extensibility Across Repos & Platforms
4. Scalable Security Coverage

3. 12-Month Roadmap

Q1 – Foundation + MVP

- Local directory API discovery engine
- Static route detection
- Baseline API calling engine
- Fuzzing engine v1
- Vulnerability report
- CLI tool

Q2 – Developer Experience + AI Layer

- LLM parameter inference
- LLM vulnerability classification
- GitHub connector
- API for integrations

Q3 – Enterprise Readiness

- Azure DevOps, GitLab connectors
- Expanded vulnerability classes
- Environment orchestration

- Dashboard v1

Q4 – Agentic Automation

- Autonomous workflow
- Remediation PRs
- Dashboard v2
- Compliance mappings

4. Risks & Mitigation

- False positives mitigation via ML
- Repo complexity via scoping
- LLM costs via caching

5. Long-Term Vision

- SAST+DAST
- IaC scanning
- Auto-fix PRs
